Git/GitHub Tutorial

This is for you to try out GitHub and git

Follow the steps using the document **github tutorial.pdf.**

This will run through the steps to use git and GitHub to upload files from git to GitHub, to make changes; have collaborators, make changes, commit files to repository, compare, synchronise, and create branches.

You will need to register for a free account on GitHub

Also where I have used my username, remember to use yours when applying the commands

When it comes to cloning your GitHub Repository, you will need to create a Personal Access Token, to do this follow the instructions using the document **To create a Personal Access Token.pdf**

Also for quick reference you can refer to **git commands.pdf**
